chemistry Basic Hydrophobic Neutral Polar

Sequence logo showing the probability of each amino acid (1-21) at each position (1-21). The y-axis represents Probability (0.00 to 1.00). The x-axis represents the position (1 to 21). The logo displays the relative frequency of each amino acid at each position, with colors indicating different groups: blue for basic, red for acidic, black for polar, green for non-polar, and purple for aromatic.
